L9G 4K Laser TV with Screen

Model 120L9G-CINE120A

Discover even more colour with Trlchroma

The L9G is the first triple colour Laser TV by Hisense that established laser standards. The comprehensive leading premium X-FUSION™ laser light source technology and the perfect interpretation of the included 100-Inch screen brings a cinematic and immersive viewing experience in the comfort of your own home. At mere inches from the wall, the innovative and cutting-edge Ultra Short Throw technology in L9G Laser TV provides top-notch audio and video experience.

Premium X-FUSION™ Laser Light Source

The triple colour laser light source generates three original colours (Red, Blue and Green) directly without a spinning colour wheel. Wider Color Gamut and continuous improvements in the Trichroma laser engine and screen create images what the human eyes truly see in nature.

3000 Lumens Brightness

3000 Lumens brightness together with ALR screen, bright, vivid images along with uniform luminance gives you unparalleled brightness.

Wide Color Gamut

The top standard for future TV colour is BT2020, and laser TV is the only display product that can meet this standard. In other words, L9G represents one of the highest standards of colour visual spectrum in the TV industry.

Ambient Light Rejection Rate

With the anti-glare technology, the L9G rejects 85% external light reflection so you can enjoy high image quality even in bright daylight whereas under the room lights you can still view true image quality with radiant colours.

Long Lifespan

X-Fusion™ laser light technology provides up to 25,000+ hours of entertainment without the need for replacing a bulb.

Android TV

Android TV makes it easier to get more from your TV. Choose from 400,000+ movies and shows from across streaming services. Ask Google to control your TV, get recommendations of what to watch, dim the lights, and more with your voice.

Smooth Motion

The Digital Micromirror Device (DMD) reacts 10-times faster to movement than OLED, creating fluid motion unsurpassed any other display technology. MEMC Technology further aids in motion enhancement, resulting in the ideal scenario for smooth and precise movement in sports, fast-action movies, gaming, and more.

HDMI 2.1 eARC

When connected to a game, the L9G together with the ALLM function of HDMI 2.1 will automatically switch your Laser TV into Game Mode. You get higher resolution and frame rates and greater bandwidth. It supports VRR and eARC, giving you more simplified connection between your TV and connected devices.

Dolby Atmos®

A leap forward from surround sound, Dolby Atmos® transports you from an ordinary moment to extraordinary experience with moving audio – sound that fills your room and flows around you with breathtaking realism to create a powerful cinema like sound experience.
